

TASTING THE LANDSCAPE

BEE CYCLE IN VENICE LAGOON

Cycle flower of the Barena
Limnium narbonense

Limnium narbonense

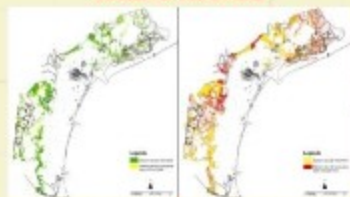

WHAT IS A BARENE?

They are shallow elongated bays typical of the lagoon. They are formed by the erosion of the lagoon and they contain water of the sea. They are characterized by the presence of a narrow channel of the water which is rich in sedimentary deposits.

DANGERS OF THE HONEY'S ENVIRONMENT!

EROSION OF THE BARENE

GeoExplorer - CIGNo

1) Nectar reollection process

2) Breeding of the bees

3) Collection of the honey

Beeskeeping and packaging

4) Distribution

5) Selling

6) Cooking and eating!

€ HOW MUCH IT COST?

€3

500 g Regular honey

€6,5

500 g Barena's honey

NEXT STEPS MH

1. More field work to collect more information and to confirm the hypothesis of how the cycle works.
2. Continue collecting data to understand the phenomena in more depth.
3. Interaction with researchers of other disciplines to have a bigger view of the cycle.

Biological beekeeping and agriculture

3) Collection of the honey

The Beekeeping activity dates from the 22nd century. In the beginning of the 20th century, beekeeping was abandoned, almost in all the Venetian lagoon and in many Venetian islands. In 1950, the government started the first Beekeeping Law. In 1980, the Beekeeping activity began. There were several beekeepers in the Venetian lagoon, but the most important ones were the ones who worked in the Barena. In 1980, the government started the first Beekeeping Law.
